## **Department of Chemistry**

Report on

Food Adulteration Awareness Program
At Jibhgaon Village
On 21<sup>st</sup> January 2023

**Report Submitted By** 

Department of Chemistry

## **Report on Food Adulteration Awareness Program**

The Department of Chemistry conducted a *Food Adulteration Awareness Program* on 21st January 2023 at Jibhgaon village to educate villagers about the harmful effects of adulterated food and to demonstrate simple methods for detecting common adulterants.

The program was coordinated by **Mr. Sandeep Deshmukh**, Head, Department of Chemistry. A total of **25 students** from the department actively participated and assisted in demonstrations, awareness activities, and interaction with the villagers.

The event was successfully organized with valuable support and cooperation from the **Gram Panchayat**, **Jibhgaon**. Members of the Gram Panchayat also participated in the awareness session and extended all necessary arrangements for the smooth conduct of the program.

During the program, students explained various types of food adulterants commonly found in milk, spices, edible oils, grains, and processed foods. Practical demonstrations were given using simple household chemicals to help villagers identify adulteration on their own. The villagers showed great interest and engaged in discussions regarding safe food practices and preventive measures.

The Gram Panchayat appreciated the initiative, acknowledging the importance of such programs in improving public health and creating awareness at the grassroots level. They expressed gratitude towards the Department of Chemistry for bringing this essential knowledge to the community.

Overall, the program proved to be informative, impactful, and beneficial for the villagers. The Department of Chemistry plans to conduct more such outreach activities in the future to promote scientific awareness and social responsibility among students
